# Automated and integrated lines for Packaging Solutions

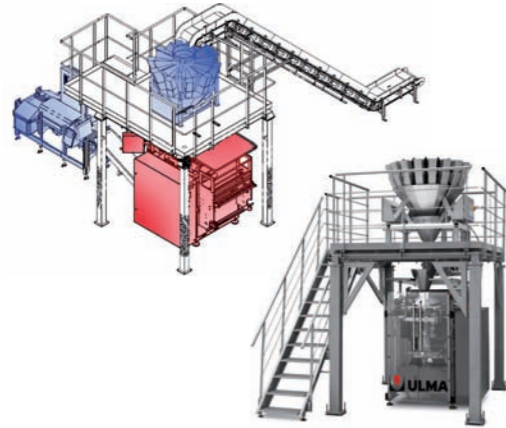

Focusing mainly on meat but also on poultry, we will show automation in integrated packaging lines.

Exhibiting our own robots for product loading and case packing, collaborating with different brands and presenting our new full range of hygienic thermoforming machines, our solution will cover any packaging demand for the meat industry.

Our global solutions include packaging options based on traysealers, thermoformers, flow wrappers and vertical machines.

Scorpius 600 with a Sercom tray denester showing a Cryovac Mirabella® application for fresh meat. Cryovac Mirabella® is a patented packaging concept which allows product-to-film contact without discolouration. Instead of wasted headspace, the product can reach the level of the tray flange.

The VTC 700 high performance continuous VFFS machine, integrated with a product lifting conveyor and a Scanvaegt (Marel) multihead weigher for frozen nuggets packaging. Installation is completed with checkweighing and a metal detector Aew Delford (Marel).

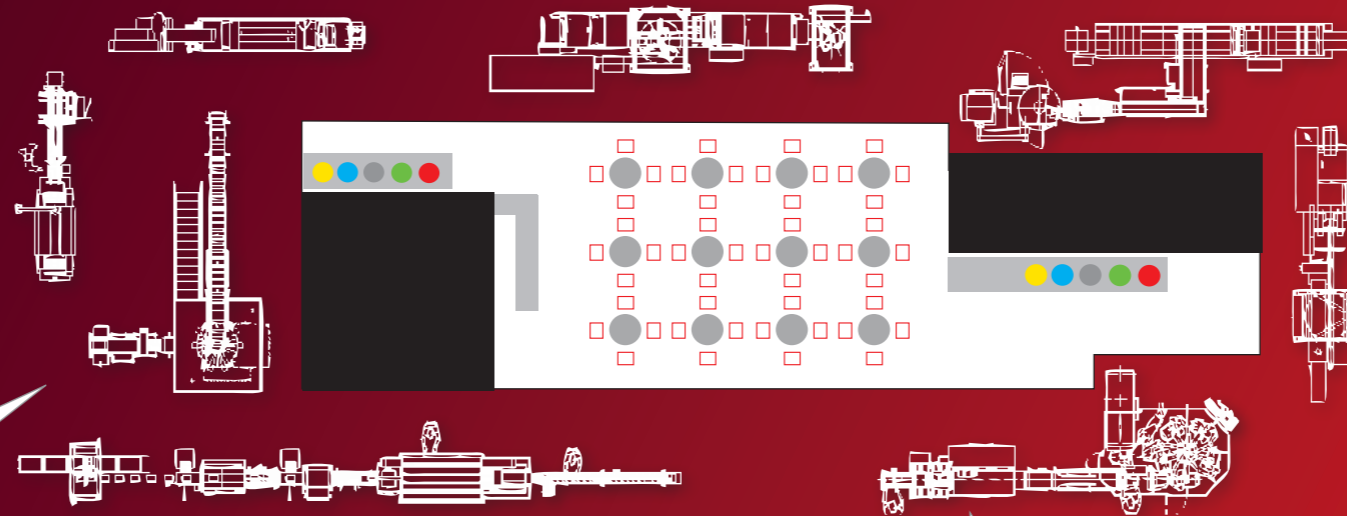

New range thermoformer TFS 300 integrated with a slicer for skin applications.

New range thermoformer TFS 700 for sliced ham with artificial vision based automatic product loading and a final case packing robot. The installation includes a Marel Polyslicer. A perfect team for sliced product packing applications in MAP.

New range thermoformer TFS 700 integrated with VEMAG portioning machine for minced meat. The new efficient monitoring software will show the data captured from the installation.

Fully automated MAP packaging solution based on an ARTIC flow wrapper with a four axis robot feeding a single salami.

A FLOW-VAC®, the vacuum packaging system that adapts to the length of each product in an automatic line. The application is based on our FV 35 integrated with an indexing feeder (Sealed Air) and a rotary vacuum chamber VR8620-14 (Sealed Air). A suitable vacuum packaging solution for smoked and processed meat and also cheese.

Complete line based on a high performance traysealer and totally automated tray denester, X ray inspection, checkweigher, labeller and finally two axis robot case packing.
